Client Company : Artisan
Arrival Time : 01/03/2025 08:00
Onsite Hours : 08:00

ASEC Report ID : 75559
Name of the Project : Naturewalk - 7 Hills Amenities
Project Location : Dallas
Weather : cloudy
Departure Time : 01/03/2025 16:00
ASEC Technician Name : Vamsi Polisetty

As requested, the site was visited by our AS Engineering and Consulting (ASEC) representative for the purpose of providing quality control inspection and testing services. Visual observation techniques were employed to verify compliance with project drawing/specifications, applicable codes, and materials submittals. The following observations were observed on site this day.

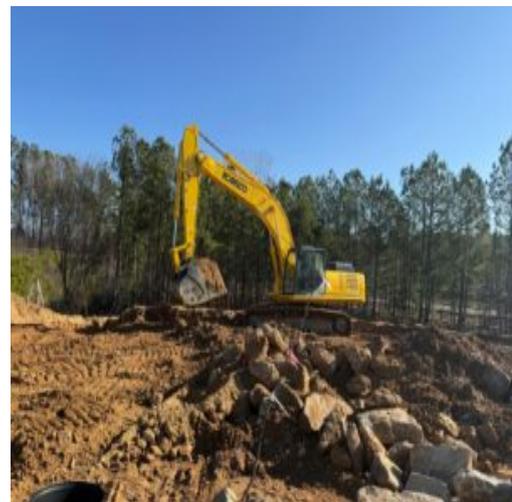

Seven Hills: Amenities:

Due to the excessive rainfall in the preceding days, the jobsite remained saturated with excessive moisture. Following inclement weather experienced during the holiday time off, the site was scarified and aerated today to allow drying out prior to the commencement of grade work.

Savannah Pipeline Company continues the installation of stormwater lines at the amenities job site, located between the clubhouse and tennis court area. Excavation work is being carried out using the Kobelco SK350LC excavator. Backfilling and compaction was continued with a Hamm Sheep Toe compactor and a remote-controlled compactor.

- Compaction testing was performed using a Troxler nuclear density gauge, along with general probing using a 3/8" diameter probe rod.
- Density test results indicate that compacted materials did meet the project requirement of 95% of the maximum dry density obtained by a Standard Proctor ASTM 698.
- Proof-rolling of the boulder fill was utilized to verify stability in lieu of density testing using a nuclear density gauge.

We appreciate the opportunity to be of service to you on this project. If you have any questions regarding this report, please feel free to contact us. We will be more than happy to discuss it with you.
