Onsite Hours : 9:00

ASEC Report ID : 74210
Name of the Project : Naturewalk - 7 Hills Amenities
Project Location : Dallas
Weather : cloudy
Departure Time : 12/05/2024 17:00
ASEC Technician Name : Vamsi Polisetty

As requested, the site was visited by our AS Engineering and Consulting (ASEC) representative for the purpose of providing quality control inspection and testing services. Visual observation techniques were employed to verify compliance with project drawing/specifications, applicable codes, and materials submittals. The following observations were observed on site this day.

Seven Hills: Amenities

- Upon arrival, the contractor was engaged grade work for the roadway using a Komatsu PC 360LC and from the west of the job site. Fill was being transported with two tandem-axled dump trucks for the tennis court and parking area, while dozing was performed with a Komatsu 39px and compaction with CAT563E.
- Compaction testing was performed using a Troxler nuclear density gauge, along with general probing using a 3/8" diameter probe rod on the Club house area.
- Proof-rolling of the boulder fill was utilized to verify stability in lieu of density testing using a nuclear density gauge.
- Density test results indicate that compacted materials did meet the project requirement of 95% of the maximum dry density obtained by a Standard Proctor ASTM 698.

Nature walk: Lot Inspection (Lot #1000, #1001, #1002, #1003, #1004, #1005, #1006).

- The contractor utilized a Komatsu D85EX bulldozer to perform grading for the above referenced lots.
- In addition, a Komatsu PC210 LC excavator was employed for the breaking up of on-site boulders. Equipped with a hydraulic hammer, the excavator was used to break large rocks and boulders encountered on the site.

We appreciate the opportunity to be of service to you on this project. If you have any questions regarding this report, please feel free to contact us. We will be more than happy to discuss it with you.
